

1 MATERIAIS

Foram utilizadas tabelas anuais de dengue em formato Excel (DENGUE2020.xlsx a DENGUE2025.xlsx), fornecidas pela Subsecretaria de Saúde de Campos dos Goytacazes, e a base temperatura_diaria_campos.csv, derivada de dados meteorológicos do Instituto Nacional de Meteorologia (INMET). A unidade geográfica analisada foi Campos dos Goytacazes/RJ, código IBGE 330100.

A variável de desfecho foi o número diário de notificações de dengue, agregado pela data dt_notific. A variável de exposição foi a temperatura média diária em graus Celsius. O período comum analisado foi de 2020-01-08 a 2025-12-30.

2 METODOLOGIA

As bases anuais de dengue foram importadas de planilhas do tipo Excel e padronizadas quanto aos nomes das colunas, sendo filtradas para Campos dos Goytacazes pelo código municipal de notificação. As datas de notificação foram convertidas para formato calendário e os registros foram agregados por dia, resultando na contagem diária de notificações.

A base meteorológica do INMET foi processada como série diária, com temperatura média, mínima e máxima. A série final manteve apenas o período comum entre as notificações de dengue e a temperatura. Para estatísticas descritivas, a série temporal completa foi mantida; para a tabela de associação e para os cálculos de correlação, foram incluídos somente os dias com casos de dengue.

Foi utilizada exclusivamente correlação de Spearman, adequada para contagens assimétricas e possíveis relações monotônicas não lineares. A associação principal foi calculada mês a mês a partir dos pares diários com casos de dengue: em cada mês, os dias com casos formaram o conjunto usado para estimar rho e p-valor entre temperatura média diária e número diário de casos. Meses com menos de quatro pares válidos ou sem variação suficiente foram classificados como não estimáveis.

Declaração de uso de inteligência artificial

Declaração de uso de inteligência artificial: houve uso de ChatGPT 5.5 e Codex como apoio técnico para organização de scripts e estruturação do relatório, revisão de código e geração automatizada dos artefatos locais, em observância à declaração de uso de IA solicitada conforme a Portaria CNPq 2664/2026, disponível em http://memoria2.cnpq.br/web/guest/view/-/journal_content/56_INSTANCE_0oED/10157/23142775. A curadoria dos dados, a interpretação epidemiológica e a responsabilidade final permanecem humanas.

3 RESULTADOS

Tabela 1 - Resumo descritivo da base diária

Indicador	Valor
Dias analisados	2.184
Casos totais	38.143
Média diária de casos	17,46
Mediana diária de casos	1,00
Máximo diário	458
Dias com zero casos (%)	49,2
Temperatura média geral	23,84

Tabela 2 - Correlações gerais auxiliares

Análise	n	Rho	p-valor
Diária geral	1110	0,206	4,74e-12
Anomalias mensais	1110	0,212	9,29e-13
Mensal agregada	63	0,257	0,042
Anual	6	0,829	0,042

A tabela principal de associação foi aglutinada por mês. O maior valor absoluto de rho mensal ocorreu em 2021-11-01 ($\rho = 0,894$, $p = 0,106$).

Na tabela diária, rho mensal e p mensal correspondem ao mês daquela data. Eles são iguais dentro de um mesmo mês porque a correlação é calculada sobre o conjunto de dias do mês, não sobre uma única observação isolada.

Tabela 3 - Auditoria interna dos cálculos

Item	Resultado
Recálculos gerais	4/4 OK
Recálculos mensais	63/63 OK
Tabela sem dias zero	0
